In years 3 and 4, SMPH students rotate through required and elective clerkships and a preceptorship at sites throughout Wisconsin, where they gain broad exposure to many aspects of medicine and public health in outpatient, inpatient, community-based, rural and inner-city settings. As students advance through their clinical years, they have increased opportunities to tailor their electives to their interests and goals. During the third year, students attend Core Curriculum Days at the Health Sciences Learning Center in Madison. These days consist of active learning about topics such as health care disparities, palliative care and unanticipated outcomes. A Transitional Clerkship that orients students as they enter their clinical years occurs in early July before rotations begin.

Students experience seven core clerkships that must be completed by the end of the third year (Internal Medicine, Neuroscience, Obstetrics and Gynecology, Pediatrics, Primary Care, Psychiatry, and Surgery); and two required clerkships that may be completed in the third or fourth year (Anesthesiology and Radiology). The fourth year includes additional required rotations, including the Acting Internship (to be completed in either the Departments of Internal Medicine or Pediatrics), Surgery selectives, and a community-based Preceptorship. Students spend their remaining time in electives (16 weeks that include required 4-weeks of clinical care).

On average, students spend about 16 weeks outside of Madison at rotations that include Aurora Health Care in Milwaukee, Aurora BayCare Health Center in Green Bay, Marshfield Clinic in Marshfield and Gundersen Health System in LaCrosse.

The Year-End Professional Skills Exam (YEPSA) is a performance-based exam given at the end of the third year. It is similar in format to an Objective Structured Clinical Exam (OSCE), and typically includes 11-13 stations. The SMPH core clinical competencies are tested and evaluated during these stations. Passing YEPSA is a graduation requirement.

Two specialty track programs are offered to students (application requirement) for longitudinal rural (WARM) and urban (TRIUMPH) experiences. WARM includes programs in Marshfield, LaCrosse, and Green Bay (and surrounding towns). TRIUMPH is based in Milwaukee.

Track Assignments in 2015-2016

WARM

In the 2015-16 academic year, there will be 5 M3s and 5 M4s assigned to the Green Bay WARM site, which includes rotations in Howards Grove, Plymouth, Sturgeon Bay and Two Rivers. There will be 10 M3s and 11 M4s in La Crosse. Students there will complete Pediatrics, part of Internal Medicine and the Primary Care Clerkship in a longitudinal format over 18 weeks, utilizing rural sites in Decorah, IA; Sparta, Tomah, Viroqua, and Whitehall. The other clerkships are completed in La Crosse.

The WARM group also includes 10 M3s in Marshfield and 11 M4s. The Marshfield WARM group utilizes many rural sites in northern Wisconsin. In addition to Marshfield, some of the locations in which WARM students spend time are Chippewa Falls, Minocqua, Merrill/Mosinee, Colby/Stratford and Rice Lake. WARM students across all three regional sites complete a community health project and participate in monthly WARM core days.

TRIUMPH

TRIUMPH will have 16 M4, 3 MD/MPH, and 16 M3 students enrolled in the 2015-16 academic year. TRIUMPH students complete most of their clinical rotations and the TRIUMPH core curriculum during their third and fourth years in Milwaukee. Students begin TRIUMPH with the two-week intensive Community and Public Health Enrichment Experience (CAPHENE) course in November of their M3 year. They will complete Primary Care, Internal Medicine and Obstetrics-Gynecology required rotations in Milwaukee beginning in January 2016. The remaining M3 required rotations will be completed in Madison or other sites throughout the state. Most M4 rotations will be completed in Milwaukee including a TRIUMPH Leadership Skills course in October of the M4 year. Students may select to take up to four months of rotations in other sites including abroad.

TRIUMPH students are matched with community organizations of their choice to complete longitudinal public health projects over their third and fourth years. A summary of these projects may be found on the TRIUMPH website http://www.med.wisc.edu/education/md/triumph/curriculum/684. Students meet regularly to learn basic skills in community and public health, to develop leadership skills, and to share celebrations, discoveries, and progress on their projects.

Many TRIUMPH students have elected to pursue dual MD/MPH degrees and/or experience in global health. While the MPH can be completed at any point, we encourage students to consider the combined TRIUMPH/MPH program. These students complete their MPH over one year between the M3 and M4 years. They may combine their TRIUMPH projects with the MPH field experience. See MPH site for further details. http://www.med.wisc.edu/education/md-mpm/track-triumph/1039. This year one of our TRIUMPH students will take a leave from medical school to pursue a global health fellowship between her M3 and M4 years.
