Supporting the TRIUMPH Program
A gift to the TRIUMPH program supports our medical students who are committed to providing health care for urban populations and reducing health disparities and by extension supports the communities in which our students are making an impact.

To discuss philanthropic opportunities please contact:

What is TRIUMPH?
TRIUMPH is a UW medical student program that provides diverse educational experiences in urban Milwaukee through the clinical years. TRIUMPH integrates clinical, community and public health, leadership and personal skill development.

Rationale
TRIUMPH was established to recruit and prepare community-engaged physician leaders to promote health equity for medically underserved urban communities in Wisconsin and beyond.

Application and Selection
The TRIUMPH application timeline is available online. Sixteen students are selected annually based on their commitment to work with urban, medically underserved communities.

Curriculum
TRIUMPH students complete a core curriculum in community and public health and clinical training in Aurora hospitals, Milwaukee area clinics and federally qualified health centers. Students work closely with community-based physicians to gain clinical skills in working with people from diverse backgrounds in urban contexts. Students learn to apply clinical, community and public health skills to serve patients and to connect them to vital resources. TRIUMPH students may also pursue MD/MPH, MD/Global Health or MD/PhD options.

Community Health Projects
TRIUMPH students collaborate with community partners to engage with urban populations in a community health improvement project. They are matched with local organizations, meet regularly with community and faculty mentors, and devote 160 hours towards their projects throughout their clinical training years. Projects address a wide range of urban health topics such as: promoting exercise and nutrition, environmental restoration, reducing violence, mentoring youth to pursue health careers, boosting immunization rates, reducing sexually transmitted infections, promoting maternal and child health, and more.

Benefits
- Students become members of a supportive learning community dedicated to improving health for disadvantaged populations.
- Students learn in health centers and clinics committed to providing high quality, patient-centered care within Aurora, a large multispecialty health system.
- Students are embedded within community organizations to work with local physicians and leaders and in specialties of their choice.
- Students gain appreciation for community assets and health disparities.
- They learn to respectfully engage with community organizations and members to conduct population health improvement projects.
- TRIUMPH prepares students to become effective clinicians and community-engaged advocates with skills to promote the health of disadvantaged urban populations (see figure at right).

Early Outcomes
Graduates report that TRIUMPH influenced their residency selections and career plans. TRIUMPH graduates have:
- matched into top-tier residencies serving medically underserved populations in Milwaukee and in urban areas throughout the country;
- selected primary care and sub-specialty careers including surgery, obstetrics/gynecology, psychiatry and emergency medicine;
- sustained community health efforts through residency and beyond;
- practiced in central city clinics and community health centers;
- completed MPH degrees and/or global health experiences; and
- become community-engaged physician leaders and faculty from Milwaukee to New York and Los Angeles.
